

<b>FAGOR</b>  Fagor Automation	<b>New Software Features</b> <b>WINDRAW55 (V3.0)</b>	Date: Sep. 23rd, 2013
	From: CNC Marketing Department FOR: Fagor Automation Network + Service Centers	Page 1 of 1

## **Version V3.0 of the WINDRAW55 application**

### **INDEX**

<b>1</b>	<b><i>New features .....</i></b>	<b><i>1</i></b>
1.1	<b><i>The palette now has 32 colors.....</i></b>	<b><i>1</i></b>
1.2	<b><i>PNG/JPG/JPEG images may now be used.....</i></b>	<b><i>1</i></b>
<b>2</b>	<b><i>Version compatibility.....</i></b>	<b><i>1</i></b>

## **1 NEW FEATURES**

### **1.1 The palette now has 32 colors.**

The color palette now offers 32 supported by the CNC8055 PPC while maintaining compatibility between 16/32 color formats.

### **1.2 PNG/JPG/JPEG images may now be used**

PNG/JPG/JPEG images may now be used on static and multi-static and button graphic entities (image size is handled internally limiting it to the maximum screen size on Windraw). Until now, only Fagor SIM elements could be inserted.

## **2 VERSION COMPATIBILITY**

The new version can also open symbols, screens and windows created with versions older than V3.0. However, entities created the 32-color palette with cannot be displayed by older versions.

The PNG/JPG/JPEG will be handled with the defined palette be it 16-color or 32-color. The Windraw55 version that supports this feature is V3.0. Older versions cannot open the PNG/JPG/JPEG handling windows.

Elements created with the 32-color palette and with PNG/JPG/JPEG images can only be seen at the CNC in version 2.0 and later.
